## THE STONE SPREADER

Foundation basing is usually a time consuming, tedious job...but not with the unique new Cherokee Stone Spreader, which can unload 15 tons of stone in 10 minutes up to 80 feet away. With the Stone Spreader, you reduce the risk of foundation or plumbing damage caused by traditional excavating equipment. By dispersing the stone very close to the grade in the foundation, the Stone Spreader reduces material waste and minimizes preparation prior to concreting.

- You will be able to work in the tightest of areas with our Stone Spreader, including reaching over fences, around pools, behind walls, in septic systems, and in open ditches where conventional dump trucks are unable to gain access.
- The Stone Spreader can save you time and money on landscaping and lawn maintenance.
- Sand, mulch, soil, and stone are spread quickly and evenly.
- Eliminates the need for wheelbarrows, bobcats, and bulldozers.
- You use only the amount of material you actually need, resulting in less waste and no excess material storage.
- Each project is completed with fewer man-hours invested.

## THE STONE SPREADER CAN UNLOAD 15 TONS OF STONE IN 10 MINUTES UP TO 80 FEET AWAY.

## LOOPBELT CONVEYOR

Cherokee's mobile conveyor reaching 130 feet can place many different materials: concrete, stone, mulch, backfill and other materials. It provides many solutions:

- Offers an answer for tight job sites and muddy ground along with the ability to place material below or above grade and across terrain inaccessible to truck deliveries.
- Places high volumes of material with ease, outputs up to 5 cubic yards per minute (up to 140 tons per hour).
- Adapts to many uses including mat pours, warehouse slabs, foundations, footings, backfill, bridge decks and more.
- Saves time and labor.
